```java
locationListener = new LocationListener() {
        ...

        @Override
        public void onLocationChanged(Location location) {
            collectedDataMap.put("gpsaccuracy", Double.toString(location.getAccuracy()));
            collectedDataMap.put("gpslatitude", Double.toString(location.getLatitude()));
            collectedDataMap.put("gpslongitude", Double.toString(location.getLongitude()));
            ...
        }
};
```
